

Changes to the RNG web page (<http://csrc.nist.gov/CryptoToolkit/tkrng.html>):

1. Remove the current Announcement, including the bulleted list.
2. In the new box we discussed, include the following links:
  - Agenda
  - RNG Development History
  - RNG Standard Strategy (coming) [This will need to be added later]
  - X9.82, Part 1
  - X9.82, Part 3
  - Hash and block cipher-based DRBGs
  - Number theoretic DRBGs
  - X9.82, Part 2 (coming) [This will need to be added later]
  - Entropy Sources
  - Testing Issues with OS-based Entropy Sources
  - Validation Testing and NIST Statistical Test Suite
  - Block cipher-based DRBGs (coming) [This will need to be added later]
3. Insert a note that the draft of X9.82 is no longer available for posting to the web site. Also, that comments may be sent to [ebarker@nist.gov](mailto:ebarker@nist.gov) or [John.Kelsey@nist.gov](mailto:John.Kelsey@nist.gov).
4. You have text about future plans further down the page that you may want to change.

DRUG  
DECODE

# Where we are and how we got here.

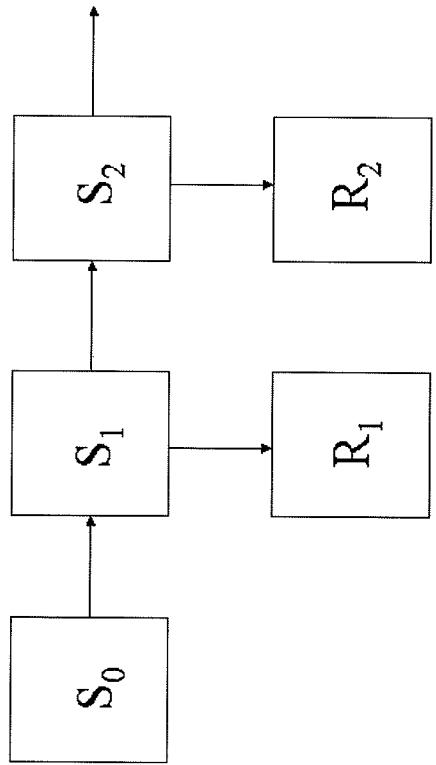

- Original goals of X9.82 DRBGs
  - Protecting internal state
  - Good randomness properties

Protection of the internal state is already fixed to the EC discrete log

- Backtracking Resistance
- Outputs

Where we are and how we got here:

$$S_i = \phi(X(S_{i-1} * P))$$
$$R_i = \phi(X(S_i * Q))$$

Where we are and how we got here.

Requirement: The Discrete Log was implemented.

This requirement is not directly met by the harness of the EC Discrete Log program.

# Soul Searching

REVIEW OF DRBG WORKSHOP  
BY GENE BRICKMAN

W hen we last left off, I had just completed my presentation on the state of affairs in the field of random number generation. I had just finished discussing the various ways in which previous work had been flawed, and I was about to begin discussing the new work that has been done since my previous review. I had just finished discussing the various ways in which previous work had been flawed, and I was about to begin discussing the new work that has been done since my previous review. I had just finished discussing the various ways in which previous work had been flawed, and I was about to begin discussing the new work that has been done since my previous review. I had just finished discussing the various ways in which previous work had been flawed, and I was about to begin discussing the new work that has been done since my previous review.

# Simple Observations

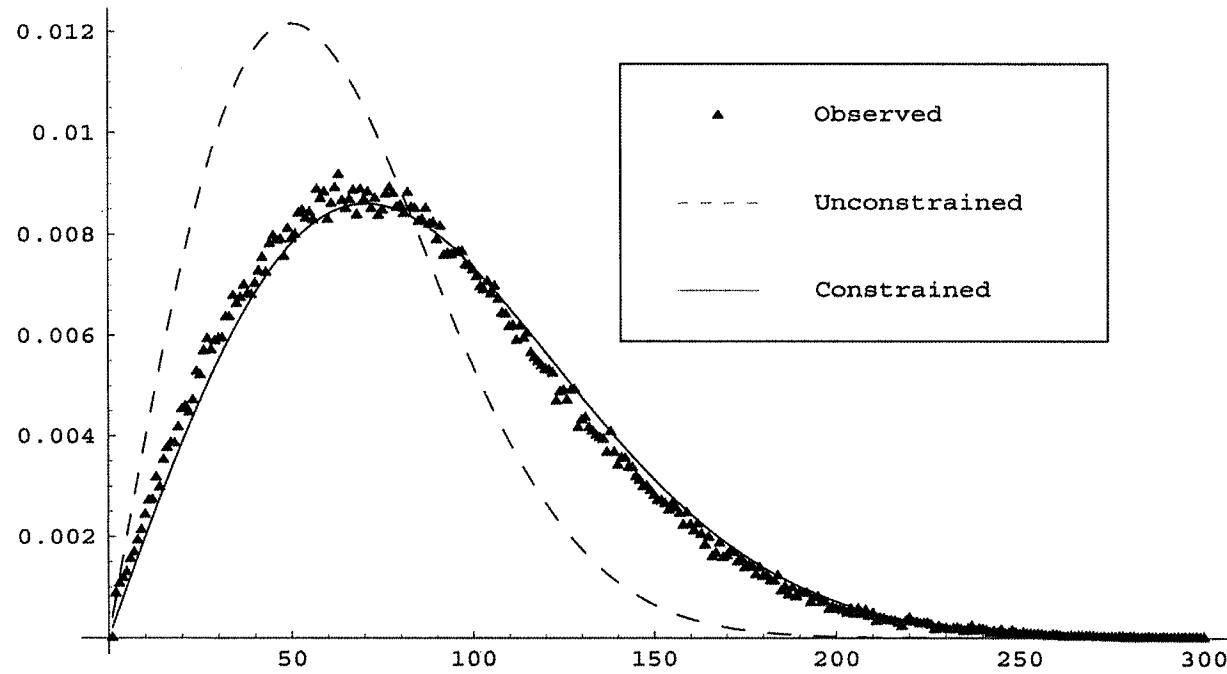

- The kernel state values can be viewed as a function of a projected function space.
  - This function has constrained preimage structure.
- A vector has at most 3 preimages:
  - $\mathbf{p} = (\mathbf{x}, \mathbf{y})$ , then  $\pi_{\mathbf{p}} = (\mathbf{x}, \mathbf{y})$
  - $\mathbf{p} = (\mathbf{x}, \mathbf{y})$ , then  $\pi_{\mathbf{p}} = (\mathbf{x}, -\mathbf{y})$
  - $\mathbf{p} = (\mathbf{x}, \mathbf{y})$ , then  $\pi_{\mathbf{p}} = (-\mathbf{x}, \mathbf{y})$
- (3<sup>d</sup> case relevant only when  $a$  is very small)

This is true independent of the size of the curve.

# Results

- BugEC is designed to have a direct connection which every X coordinate can receive from function or promotion.
- Simple yes/no function bias shows that the bias than the X-coordinate bias is more effective.
- We can distinguish the distribution of X-coordinates.
- We've done some further combination experiments to search for bias in the output.

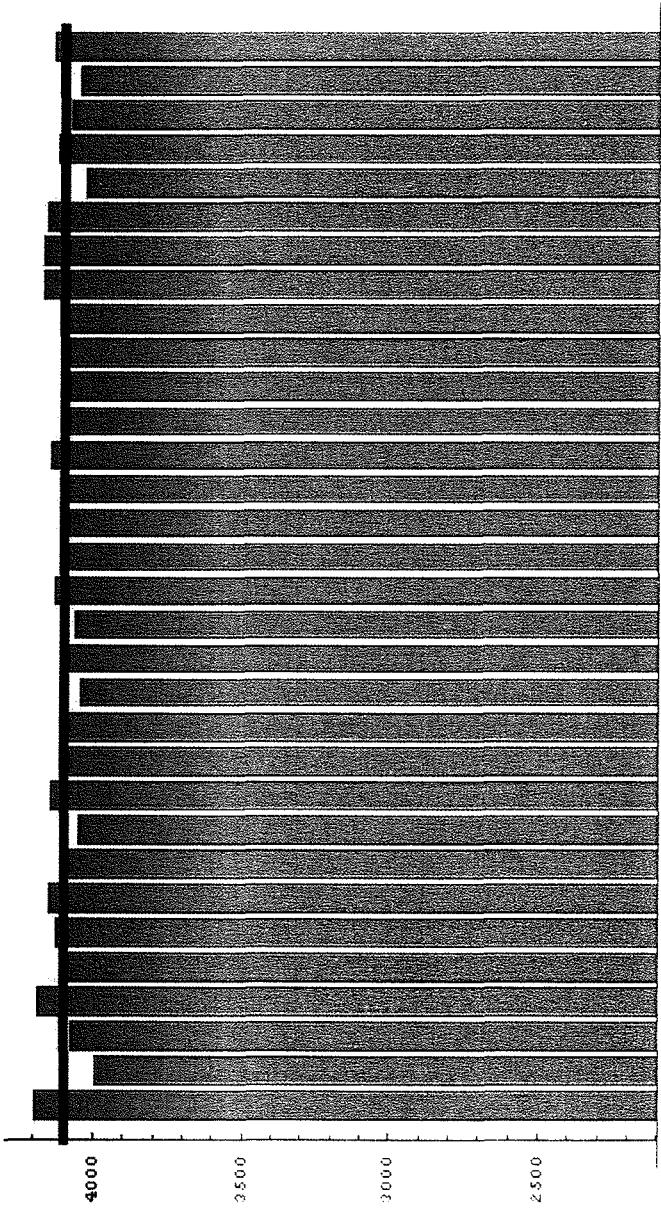

# Distribution of Rho Lengths

# Distribution of X-Coordinates

For any value  $x$  in  $[0, p]$ , the emergence  
in the distribution of distinct x-coordinates  
of values in  $[x, x + \delta]$  is roughly proportional  
to the probability of  $x$  being chosen  
expected to be in that interval if they were  
distributed uniformly is bounded by  
 $\sqrt{\log_2(p)}/\sqrt{\pi}(p)$   
(when  $p$  is sufficiently large)

# Distribution of X-Coordinates

# Proposed Changes to X9.82 Part 3

- Provide a means for generating P and Q in a verifiable fashion.
- Elimination of the Binary Curves from the Dual EC.
- Clarifying text to describe what assurances the EC discrete log problem provides in this setting (and what assurances it is not meant to provide).
